

Stainless steel centrifugal pumps

FOR GENERAL AND PROCESSING INDUSTRIES

FP6
NP6
CRP6

MEI
Complies with
EU No 547/2012

CRP

NP

The Packo pump series 6 includes the pump types: 63, 66 and 68 with capacities ranging from 0,55 till 2,2 kW. They are available in 2 versions FP for the food industries and NP for the processing industries.

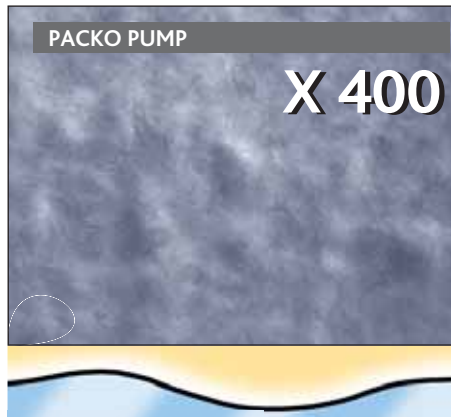

Derived from the FP and NP models are the CRP series of airhandling pumps. These comprise the same component parts with a different pump casing. The pumps are close coupled to an IEC standard motor.

Functionally designed

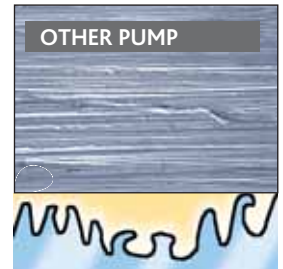

MATERIALS AISI 316 L ELECTROLYTICALLY POLISHED

Standard practice on all Packo pumps resulting in:

- Improved hygiene.
- Smoother finish for easier cleaning; greater efficiency.
- More resistant to corrosion and erosion attack thanks to the higher concentrations of chromium and nickel at the surface and the total absence of micro-deformities which finishing or glass-blasting can cause

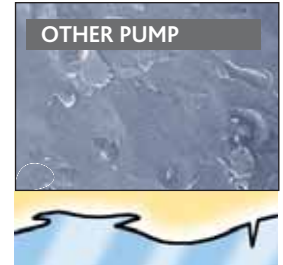

Electropolished

OTHER PUMP

Linished 240 grit

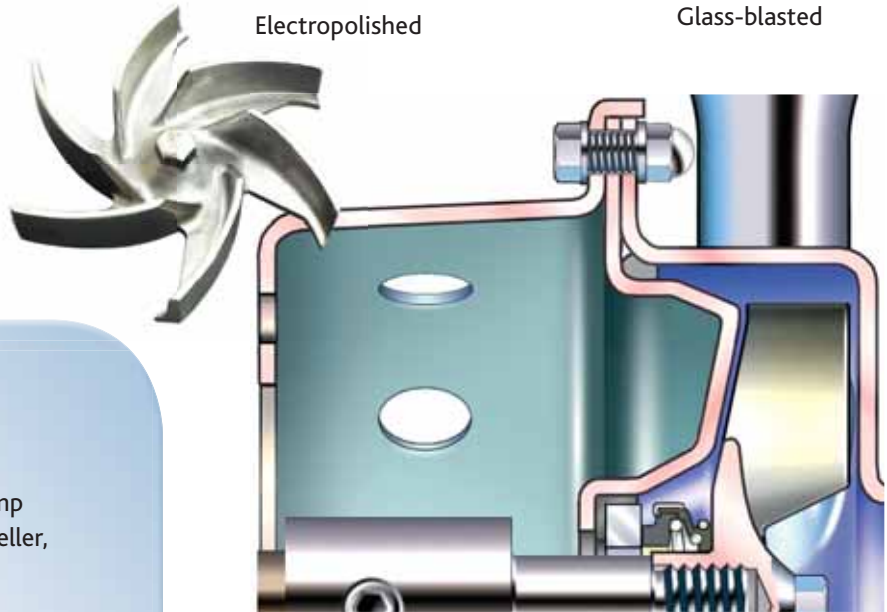

OTHER PUMP

Glass-blasted

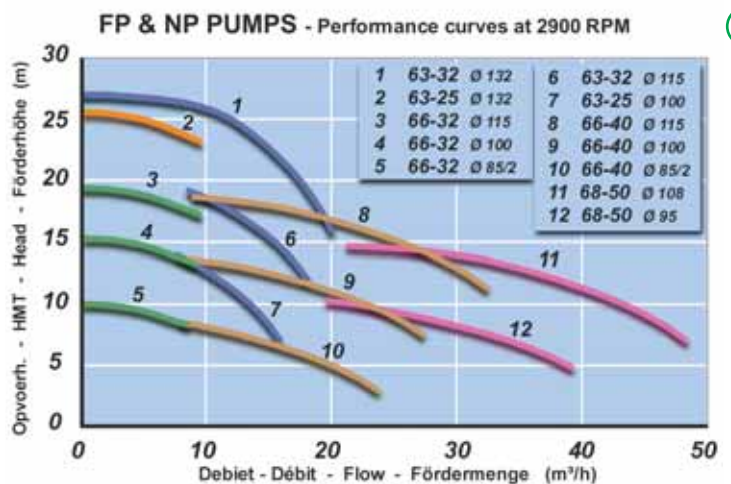

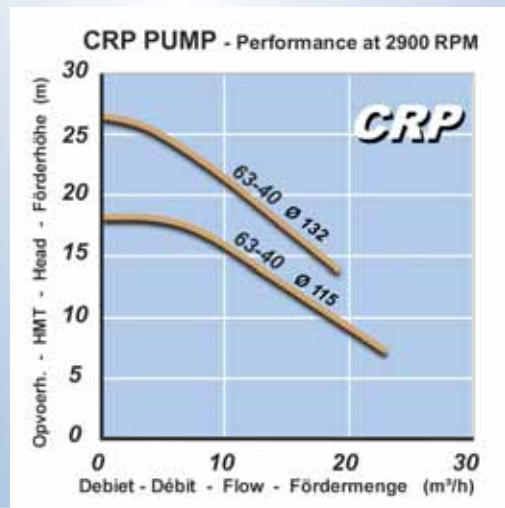

OPEN IMPELLER

- Non clogging.
- Excellent air handling.
- Simple to clean (spring is not in contact with the liquid for FP).

CRP: CIP return pump - Scavenge pump

The CRP pump consists of the same components as the FP. Only the pump casing is different, i.e. the same impeller, the same seals, etc.
